

AI-Assisted SDLC Team

AI builds. Engineers review. Throughput goes up.

THE PROBLEM

Engineers spend 30–40% of sprints on low-value work — typing boilerplate, chasing changes, reworking stale code.

THE SHIFT

Your AI agents:

PM/BA drafts stories • **Backend** writes APIs + tests • **Frontend** builds UI
SQL writes migrations • **QA** generates test cases

MID-SPRINT CHANGES — HANDLED AUTOMATICALLY

Story changes → AI detects impact → updates affected code → opens follow-up PR → pings only affected devs → human reviews 2-line diff → merge ✓

THE NUMBERS

Metric	Today	With AI
Time typing	60%	20%
Time deciding	40%	80%
Coordination	12–22 h	2–4 h
Throughput	Baseline	+30–40%

+30–40%
sprint throughput uplift
